

ABSTRACT OF THE DISCLOSURE

A combination cellular telephone, sound storage device, and email communication device,
5 used to make or receive a voice message while talking on the cellular telephone and then
transmit the voice message to an email address, has microphone, a speaker, and a
transmitter/receiver that are operatively connected to a controller. The controller is further
operably connected to a voice recorder memory that enables a voice message to be recorded,
and an email address memory that stores at least one email address. The combination
functions to transmit the voice message associated with the at least one email address such
that the voice message is delivered to the email address.
